

WORKING BOOK KEY

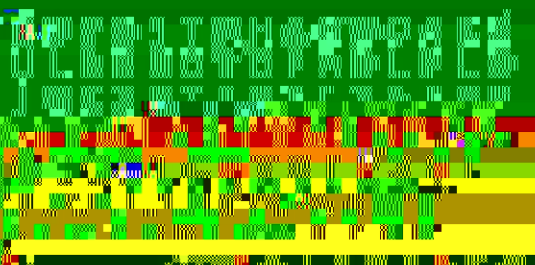

# Solar Energy

The sun is the source of energy for most life on Earth. It provides the energy that plants use to make food through photosynthesis. This energy is then passed on to animals that eat the plants. The sun also provides the energy that drives the water cycle and the weather.

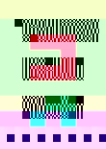

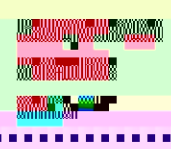

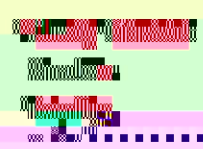

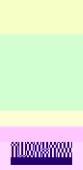

There are many ways to harness the sun's energy. One way is through solar panels, which convert sunlight into electricity. Another way is through solar water heaters, which use the sun's energy to heat water for use in homes and businesses. There are also many other ways to use solar energy, such as solar cookers and solar stills.

The sun's energy is used to power many different things, including:

Solar energy is a clean and renewable source of power. It can be used to generate electricity, heat water, and cook food. It is a great way to reduce our dependence on fossil fuels and to help protect the environment.
